

Справка о статьях, принятых к публикации

№	Авторы	Название статьи
1	2	3
1	S N Antontsev and S I Shmarev	The energy method. Application to PDEs of hydrodynamics with nonstandard growth
2	A A Alabuzhev	Influence of a surface plates inhomogeneity on a translation oscillations of a drop
3	A A Alabuzhev and M A Kashina	The dynamics of hemispherical drop under the influence of a alternating electric field
4	Gennady Alekseev, Anastasiya Tokhtina and Olga Soboleva	Invisibility problem in acoustics, electromagnetism and heat transfer. Inverse design method
5	A N Baykin and S V Golovin	Analysis of the in situ stress contrast impact on a planar hydraulic fracture propagation using the fully coupled poroelastic model
6	I A Banshchikova	Evaluation of the stress-strain state of rod at torsion from an anisotropic material in the shear direction at creep
7	I A Banshchikova and I V Lubashevskaya	The time of creep fracture of the axisymmetrically loaded structures
8	I A Bedarev and A V Fedorov	Mathematical modeling of the detonation wave and inert particles interaction at the macro and micro levels
9	E A Biberdorf and A M Blokhin	Real gas flow about a round cone
10	Yu A Bogan	The general boundary value problem for an elliptic higher order equation in the plane with constant real coefficients
11	A V Boiko, S V Kirilovskiy, Y M Nechepurenko and T V Poplavskaya	On non-symmetric axial corner-layer flow
12	A A Cherevko, E E Bord, A K Khe, V A Panarin and K J Orlov	The analysis of solutions behaviour of Van der Pol Duffing equation describing local brain hemodynamics
13	Semyon P Borisov and Alexey N Kudryavtsev	Numerical simulation of nonlinear dynamics of 1D pulsating detonations

14	S A Boronin, A A Osipov and J Desroches	Flow of viscoplastic suspensions in a hydraulic fracture: implications to overflush
15	Roman Brizitskii	Study of control problems for the stationary MHD equations
16	I G Brodova, A N Petrova, O B Naimark, O A Plekhov, S V Razorenov and E V Shorokhov	The influence of the structure of ultrafine-grained aluminium alloys on their mechanical properties under dynamic compression and shock-wave loading
17	A M Gaifullin, D A Gadzhiev, A V Zubtsov	Vortices appearance and diffusion
18	A V Gerasimov, S V Pashkov and Yu F Khristenko	Impact interaction of shells and structural elements of spacecrafts with the particles of space debris and micrometeoroids
19	V O Kaledin, A Ye Gilyova, O N Budadin, S O Kozelskaya	Modeling of thermomechanical processes in woven composite material at blow by the striking element
20	E I Golovneva, I F Golovnev, L A Merzhievsky	Molecular-dynamics investigation of the nano-bar stability
21	Sergey Golushko	Mathematical modeling and numerical calculation of composite structures
22	Sergey Golushko and Boris Semisalov	Calculation and design of lattice cylindrical shells manufactured of unidirectional CFRPs
23	V B Bekezhanova and O N Goncharova	Three-dimensional thermocapillary flow regimes with evaporation
24	Yuri Grigor'ev	An analytical solution of the ill-posed Cauchy problem for Lamé equation in a rectangle
25	D S Denisenko and N I Makarenko	Supercritical stratified flow over an uneven bottom
26	G V Dolgoleva and A I Zyкова	The choice of the energy embedding law in the design of heavy ionic fusion cylindrical targets
27	O A Dyakova and O Yu Frolov	Pressure driven laminar flow of a power-law fluid in a T-channel
28	Aleksey Yegitov	Asymptotic representation for spectrum of linear problem describing flows of viscoelastic polymeric fluid
28	Ivan E Egorov	A Vragov boundary value problem for an implicit equation of mixed type
30	A M Gaifullin and V V Zhvick	Non-symmetrical separated flow along the parabolic wing

31	J S Zayko and V V Vedeneev	Self-exciting oscillations of elastic tube conveying fluid at laminar and turbulent flow regimes
32	A V Dovgal, B Yu Zanin and A M Sorokin	Experimental studies of laminar-turbulent transition on a body of revolution
33	K V Zakharchenko, V P Zubkov, V I Kapustin, E A Maksimovski and A V Talanin	The influence of coating technologies on stress-strain characteristics of the sample at periodic loading
34	S A Zelepugin, O V Ivanova, A S Yunoshev and A S Zelepugin	Numerical simulation for the propagation and action of shock waves during explosive synthesis
35	B S Zlobin A A Shtertser, V V Kiselev S D Shemelin	Impact compaction of ultra high molecular weight polyethylene
36	Nadezhda Zyuzina and Vladimir Ostapenko	Numerical simulation of the drop spreading on a horizontal plane
37	O O Ivanov, V V Vedeneev, V M Kulik and A V Boiko	The influence of compliant coatings on skin friction in the turbulent boundary layer
38	Yaroslav Ignatenko, Oleg Bocharov and Roland May	About criterion of incipient motion and entrainment into suspension of a particle from cuttings bed in shear flow of non-Newtonian fluid
39	Alexander Kazakov, Anna Lempert, Sergey Orlov and Svyatoslav Orlov	On exact solutions of a heat-wave type with logarithmic front for the porous medium equation
40	K A Karnaukhov, V D Baskakov, V V Korenkov and O V Zarubina	Peculiarity of she shaped-charge liner collapse concerning the unevenness in its cross-section
41	S V Kirilovskiy and T V Poplavskaya	Hypersonic boundary layer stabilization by using a wavy surface
42	Alexander Kiryushkin and Leonid Minkov	Solution of internal ballistic problem for SRM with grain of complex shape during main firing phase
43	S P Kiselev, V P Kiselev, V Yu Liapidevskii, V N Zaikovskii	Modeling of gas flows in radial micro-nozzles
44	L S Klimenko, B S Maryshev	Influence of the solute immobilization on linear stability within the solute analogy of Horton–Rogers–Lapwood problem

45	P V Kovtunenکو	Stability of a horizontal shear flow
46	V M Kornev	On catastrophic fracture of steel structures at temperatures lower than cold brittleness threshold
47	I V Kuznetsov and S A Sazhenkov	Quasi-solutions of genuinely nonlinear forward-backward ultra-parabolic equations
48	E V Kuz'min, S V Kuz'min, V I Lysak and A N Lata	Plastic deformation and wave formation on the interface of metals welded by ultrasound-assisted explosive welding
49	N A Kucher and A A Zhalnina	On the existence of global solutions to equations for mixtures of compressible viscous fluids
50	A V Fedorov, T A Khmel', S A Lavruk	Modeling of detonation propagation in expansion channel in bidisperse mixture
51	A Larichkin, K Zakharchenko, B Gorev, V Kapustin and E Maksimovskiy	Influence of the creep ageing process on the fatigue properties of components from V95pchT2 (analog 7175T76) and V95ochT2 (analog 7475) aluminium alloys
52	M A Legan, A N Novoselov and N V Fedorova	Formation of annular cracks in glass during contact interaction
53	M A Legan, V A Blinov, A Yu Larichkin and A N Novoselov	Application of the boundary elements method for modeling of the fracture of cylindrical bodies by hydraulic fracturing
54	Nickolay A Lutsenko and Sergey S Fetsov	On numerical model of one-dimensional time-dependent gas flows through bed of encapsulated phase change material
55	Nickolay A Lutsenko and Vladimir A Levin	Smoldering of porous media: numerical model and comparison of calculations with experiment
56	O N Lyubimova, A V Morkovin and V V Andreev	Modeling of the kinetics of diffusion processes in the formation of a junction glass-steel
57	I Y Kmit and N A Lyulko	Asymptotic behavior of solutions to perturbed superstable wave equations
58	K K Maevskii	Numerical investigations of oxides and silicates under shock- wave loading
59	Alexander Mamontov and Dmitriy Prokudin	Modeling viscous compressible barotropic multi-fluid flows

60	Alexander Mamontov and Dmitriy Prokudin	Global solvability of 1D equations of viscous compressible multi-fluids
61	Pavel Markov	Group classification applications for analysis of discrete models of flow in porous media
62	B S Maryshev	The stability of homogeneous pulsating vertical seepage of mixture through porous media with solute immobilization
63	Denis S Goldobin and Boris S Maryshev	Hydrodynamic dispersion in porous media with macroscopic disorder of parameters
64	Sergey V Meleshko, Yurii N Grigoriev, ^[1] Adisak Karnbanjong and Amornrat Suriyawichitseranee	Invariant solutions in explicit form of the Boltzmann equation with a source term
65	S G Mironov, T V Poplavskaya and S V Kirilovskiy	Effect of porous material heating on the drag force of a cylinder with gas-permeable porous inserts in a supersonic flow
66	K M Moiseeva, D A Krainov and A A Dement'ev	Burning stability of the coal-dust methane-air mixture in a recuperative burner
67	S V Fedorov, S V Ladov and Ya M Nikolskaya	Computational and experimental research of explosive meteorial devices with combined cumulative liners of the semi-sphere-cylinder shape
68	S P Bautin and N S Novakovskiy	Numerical simulation of shock-free strong compression of 1D gas layer's problem subject to conditions on characteristic
69	Andrei A Osiptsov	Multiphase flow models for hydraulic fracturing technology
70	E I Palchikov, A V Dolgikh, V V Klypin, I Y Krasnikov and A M Ryabchun	Pulse X-ray device for stereo imaging and few-projection tomography of explosive and fast processes
71	Alexander A Papin and Margarita A Tokareva	Correctness of the initial-boundary problem of the compressible fluid filtration in a viscous porous medium
72	D V Parshin, I O Kuianova, A S Yunoshev, K S Ovsyannikov and A V Dubovoy	On the mechanics of cerebral aneurysms: experimental research and numerical simulation

73	V I Pen'kovskii and N K Korsakova	Effect of wave action on near-well zone cleaning
74	N D Baykov and A G Petrov	Cumulative jet generation in a plane parallel potential flow of the perfect incompressible fluid
75	P A Polivanov, A A Sidorenko and A A Maslov	Suppression of a laminar separation by a spark discharge at a supersonic Mach number
76	T V Poplavskaya, S V Kirilovskiy and S G Mironov	Simulation of a supersonic flow around a body with a frontal gas-permeable insert by using a skeleton model of a highly porous cellular material
77	S V Popov and V G Markov	Boundary value problems for parabolic equations of high order with a changing time direction
78	Dmitriy Prokudin	Global solvability of the initial boundary value problem for a model system of one-dimensional equations of polytropic flows of viscous compressible fluid mixtures
79	E S Prokhorov	Detonation velocity in poorly mixed gas mixtures
80	G A Raevskaya, K Zakharchenko and A Larichkin	Determination of optimum parameters of the technological process for plates forming from V95 and V-1461 alloys in creep applied in aircrafts constructed by «Sukhoi design bureau»
81	Boris Samuilovich Reznikov and Kirill Anatolyevich Kuzmin	Accounting anisotropy of properties of substructural elements in study of strength of macroinhomogeneous media in the case of plane stressed state
82	A Reshmin, A Sudarikova, S Teplovodskii and J Zayko	Technology for formation of axisymmetric free jets with long laminar region
83	T V Kolmakova and Y A Rikun	Computer modelling of the mechanical behaviour of the cervical spine segment and intervertebral disk prosthesis
84	Zh Yu Saritskaya and R V Brizitskii	Leading coefficient's recovering problem for nonlinear convection–diffusion–reaction equation
85	E V Semenko and T. I. Semenko	Spontaneous emission in the linear problem of shock wave disturbance in a non-classical case
86	V V Shcherbakov	Shape derivative of the energy functional for the bending of elastic plates with thin defects
87	Anton Sibir	Numerical study of a mathematical model of internal erosion of soil
88	V G Smelikov	Generation of elastoplastic waves in shaped-charged (cumulative) jets and perforated barriers
89	Alexey Smolin, Igor Smolin, Galina Eremina and Irina Smolina	Multiscale simulation of porous ceramics based on movable cellular automaton method
90	V N Starovoitov and B N Starovoitova	Modeling the dynamics of polymer chains in water solution. Application to sensor design

91	B N Starovoitova and V N Starovoitov	Acoustic properties of a layered porous elastic structure saturated with a Maxwell fluid
92	I V Stepanova	On some group properties of heat and mass transfer equations
93	O I Stoyanovskii, B S Zlobin, A A Shtertser and Yu P Meshcheryakov	Metal explosion chambers: designing, manufacturing, application
94	I V Sturova and L A Tkacheva	Wave motion in a fluid under an inhomogeneous ice cover
95	S V Sukhinin, V S Yurkovskiy, A P Konstantinov and A V Trilis	Wave propagation in channels and cracks with elastic walls
96	A P Konstantinov, S V Sukhinin and V S Yurkovskiy	Wave transmission and reflection at the boundary of phononic crystals
97	Dmitry Tereshko	Numerical solution of inverse problems in hydrodynamics
98	Alexander Blokhin and Dmitry Tkachev	Analogue of the Poiseuille flow for incompressible polymeric fluid with volume charge. Asymptotics of the linearized problem spectrum
99	Anatoliy V Trotsyuk	Numerical simulation of classical and rotating detonation waves in methane mixtures
100	O M Usol'tseva, V I Vostrikov, P A Tsoi, V N Semenov and O A Persidskaya	The time-space relationship between strain, microstrain temperature fields and microseismic emission parameters in geomodels with hole under external loading
101	A V Fedorov and D A Tropin	Mathematical description of ignition, combustion and propagation of detonation in reacting gas mixtures in the presence of micro- and nanoparticles
102	P A Fomin, A V Trotsyuk and A A Vasil'ev	Reduced detonation kinetics and detonation structure in one- and multi-fuel gaseous mixtures
103	A M Khludnev and T S Popova	Parameter identification problems for thin inclusions in elastic bodies
104	T A Khmel	Cellular detonations in nano-sized aluminum particle gas suspensions
105	I S Tsyryulnikov, S V Kirilovskiy and T V Poplavskaya	Interaction of long-wave perturbations with a shock wave on a wedge and method of mode decomposition of supersonic flow pulsations
106	P A Tsoi and I P Homenok	Study of deformation-strength properties of sandstone under multistage triaxial compression

107	Sergey Isaenkov, Andrey Cherdantsev, Mikhail Cherdantsev and Dmitriy Markovich	Quantitative analysis of transverse non-uniformity of liquid film at the initial stage of annular-dispersed flow
108	V K Andreev and E N Cheremnykh	The unidirectional motion of two heat-conducting liquids in a flat channel
108	A A Chesnokov, V Yu Liapidevskii and I V Stepanova	Kinematic-wave model of viscous fingers with mixing layer
110	Yu A Chirkunov	Motion of gas in highly rarefied space
111	K A Shishmarev, T I Khabakhpasheva and A A Korobkin	Deflection of ice cover caused by an underwater body moving in channel
112	A V Shutov and A Yu Larichkin	Finite strain transient creep of D16T alloy: identification and validation employing heterogeneous tests
113	M E Eglit, A E Yakubenko and T A Yakubenko	Influence of bed material entrainment and non-Newtonian rheology on turbulent geophysical flows dynamics. Numerical study
114	S N Yakovenko	Lee wave breaking region: the map of instability development scenarios
115	A A Yanchenko, E Romenski and A K Khe	Numerical modeling of compressible fluid flow through elastic porous medium
116	A P Chupakhin and A A Yanchenko	Special vortex in relativistic hydrodynamics
117	S V Poplavski, V M Boiko, V V Lotov and A U Nesterov	On the dispersion of liquid in coaxial supersonic gas jet

118	V V Gordeev, M V Kazutin and N V Kozyrev	Effect of additives on CuO/Al nanothermite properties
119	V P Zamuraev and A P Kalinina	Transonic streamline of the symmetric wing at the effect of unilateral oscillations which are characterized by the spectrum of two frequencies
120	V P Zamuraev and A P Kalinina	Study of the effect of geometry of the channel with variable cross section at the formation of transonic region into supersonic flow with energy supply
121	I B Palymskiy, V I Palymskiy, P A Fomin and A V Trifanov	About control of convection intensity in chemical reacting equilibrium gas

122	G G Lazareva, A S Arakcheev, I V Kandaurov, A A Kasatov, V V Kurkuchekov, A G Maksimova, V A Popov, A A Shoshin, A V Snytnikov, Yu A. Trunev, A A Vasilyev and L N Vyacheslavov	Calculation of heat sink around cracks formed under pulsed heat load
123	A I Chanyshhev, O E Belousova and I M Abdulin	Static and dynamic Cauchy problems for the equations of elasticity, plasticity and post-limit deformation theories
124	V F Kopiev, S A Chernishev, R V Akinshin and M A Yudin	The study of stationary flow in the core of thin vortex ring
125	S V Iyavoynen, I A Banshchikova, I V Lubashevskaya and M A Legan	High temperature deformation of steel 09G2S under non- stationary loading conditions
126	S S Rassokha S V Ladov and A V Babkin	Numerical analysis of fluted shells rotation
127	A M Kovrizhnykh and S A Kovrizhnykh	Deformation and Fracture of a Material in One-Dimensional Problems under Creep
128	A V Sviridov, V I Odinokov, E A Dmitriev, A I Evstigneev and O V Bashkov	Numerical Simulation of Stress-Strain State of Electrophoretic Shell Molds
129	A G Petrov and M A Yudin	Cylinder instability in bounded flow with constant vorticity
130	Timur Bekibayev, Uzak Zhabbasbayev and Gaukhar Ramzanova	Optimization of oil-mixture "hot" pumping in main oil pipelines
131	V I Kapustin, K V Zakharchenko	On the research of dissipative processes at inelastic strain of metals
132	A R Zagidulin, E G Podruzhin and G I Rastorguev	Modelling the motion of a non-free system of rigid bodies using the Lagrange equations of the first kind

133	V M Abashev, I V Eremkin, N P Zhivotov, V P Zamuraev, A P Kalinina, P K Tretyakov and A V Tupikin	Study of gas dynamics of the intersecting jets in a semi-open channel
134	S A Orlov, K A Matveyev and G I Rastorguev	Rate making and shock testing of spacecraft on-board equipment
135	I Kulikov, I Chernykh and V Protasov	The numerical modelling of MHD astrophysical flows with chemistry
136	A V Shutov, A A Kaygorodtseva and N S Dranishnikov	Optimal error functional for parameter identification in anisotropic finite strain elasto-plasticity
137	V V Neverov and V V Shelukhin	Thermodynamics of micropolar fluids with variable concentration of polar particles
138	V S Nikiforovskaya and A F Voevodin	Numerical models to calculate hydrologic processes in river and lake-river systems
139	Nataliya Satonkina	Duration of the zone of high electrical conductivity at the detonation of RDX of different densities
140	A I Reshetova, T V Poplavskaya, S V Kirilovskiy and I S Tsyrlunikov	Effect of sound-absorbing coatings on the disturbances evolution in a flow of a mixture of vibrationally excited gases
